

PROPOSAL • INTERNAL

Slack notifications for CapTracker

Bringing CapTracker's alerts, staffing broadcasts and personal task reminders into Slack — where the team already works.

Prepared for: Delivery / BU management • Prepared by: Sahad Salmi
Product: CapTracker (Relay) • internal Dubai consulting BU tool

1. The opportunity

CapTracker already sends the right alerts — a project going “up for grabs,” a deliverer stalling, a goal-change to approve — but they live inside the app's bell and an optional browser pop-up. People miss them when the tab is closed. **Slack is where the team already is.**

Every CapTracker alert already flows through a single notification service, so adding Slack is a clean new **delivery channel** — no change to how the app works, just where the message lands. This proposal covers what we can send, shows real samples, and adds one new capability the team has asked for: **personal task reminders that ping you in Slack at the time you set.**

What we'd gain

- **Faster staffing** — “up for grabs” projects get grabbed in seconds from a channel, not whenever someone reopens the app.
- **Fewer dropped handoffs** — assignments, transfers and goal-change requests reach people in their DMs.
- **Action without switching tabs** — Accept a seat, approve a goal change, or mark a task done straight from Slack.
- **Personal accountability** — set a reminder on your own to-dos and Slack nudges you when they're due.

2. How it works (in one picture)

CapTracker posts to Slack two ways: **direct messages** to an individual (personal alerts, matched by @alphasights.com email) and **channel posts** for team-wide broadcasts and digests. With a lightweight Slack app we can also add **buttons** that act back on CapTracker — so a message isn't just a notification, it's the action itself.

3. What we can send today

These already fire inside CapTracker and can go to Slack as-is:

Alert	Goes to	Slack surface	Button?
Project up for grabs	Everyone eligible	Channel	Accept seat
New project assigned	The deliverer	DM	-
Seat claimed from broadcast	The PL	DM	-
Delivery logged - review	The PL	DM	-
Goal-change requested	The PL	DM	Approve / Decline
Goal-change resolved	The requester	DM	-
Stalled on First Deliverable	Deliverer + PL	DM	-
Project transferred to you	The new PL	DM	-

And a few we can add, Slack-native:

- **Lunch / evening-coverage prompts** as DMs with Yes / No / Remind buttons.
- **Morning “update calls sold”** nudge to PLs.
- **Daily / weekly digests** to a team channel: market-share pulse, who's free, aging First Deliverables.
- **Personal task reminders** (Section 5) — the new one.

4. What it looks like (samples)

Illustrative mock-ups of how CapTracker messages would appear in Slack.

captracker-up-for-grabs

C
T

CapTracker APP 9:41 AM
Project up for grabs — BCG / Buy-side diligence
No one's staffed and everyone's busy on fresh projects. **2 seats open** • N 3 • goal 9 • US-only pool.
First to accept takes a seat. Re-pings every 15 min until filled.

Accept a seat

Not now

Channel broadcast — the highest-value win: staffing gaps get filled in seconds.

C
T

CapTracker APP 2:12 PM
Goal-change request — Raphaelle on McKinsey
Requesting goal **15** (from 20), status **active**. "Pool is thinner than expected."
Direct message to you as the Project Lead.

Approve

Decline

Interactive DM — approve or decline without opening the app; CapTracker applies it instantly.

C
T

CapTracker APP 8:03 AM
New project assigned to you
BCG — Market sizing (widget sector). Your goal is **8** profiles. Stage: First Deliverable.

Open in CapTracker

Simple DM — the assignment reaches the deliverer wherever they are.

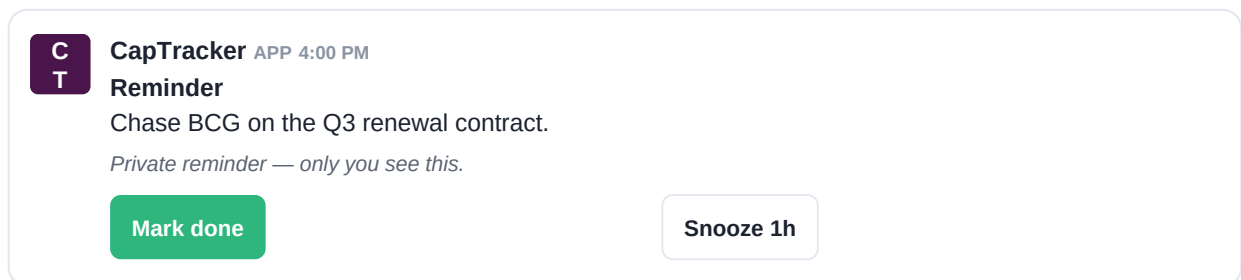

5. New capability: personal task reminders

CapTracker already has an **Admin** section in the notes to-do box where each person writes their own reminders. Today those just sit in a list. This proposal adds an optional **reminder time** to a personal task — and when it's due, CapTracker sends **you** a Slack DM, with buttons to mark it done or snooze. Your own private nudge, no one else sees it.

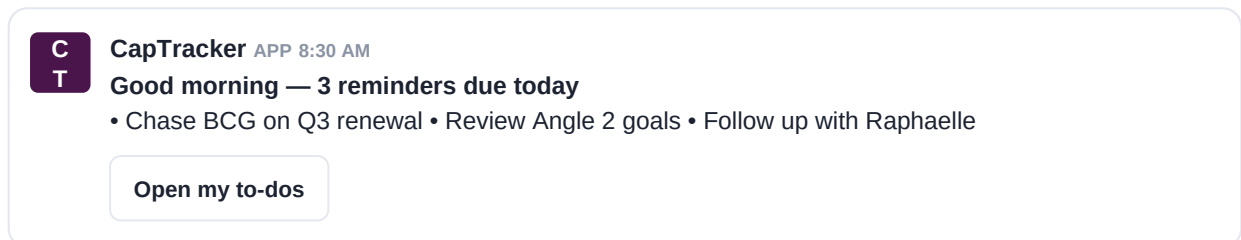

How a user sets it

- In the to-do box's **Admin** section, add a reminder and pick a time (e.g. “Chase BCG contract — today 16:00”).
- At that time, CapTracker DMs you in Slack.
- **Mark done** clears it from the app and Slack at once; **Snooze** re-reminds in 1 hour.

What it looks like

Personal task reminder DM at the time you set. Marking done clears it everywhere (one task, one source).

Optional morning digest of your own tasks — a gentle daily roll-up instead of scattered pings.

Small addition to the app: personal reminders currently have no time; we'd add an optional due/remind time and a scheduler tick that sends the DM. Everything else already exists.

6. Suggested rollout

Phase	What ships	Effort	Value
1 - Channel	"Up for grabs" + digests to a Slack channel via a webhook. No per-user setup.	~1-2 days	High, fast
2 - Slack app + DMs	Personal alerts as DMs (email-matched) with Accept / Approve / Decline buttons.	~1 week	High
3 - Personal reminders	Reminder time on Admin tasks + scheduled Slack DMs (done / snooze).	~2-3 days	Team-requested
4 - Preferences	Per-person control of which alerts go to Slack vs the in-app bell.	~2 days	Polish

Each phase stands alone and ships behind a config flag — inert until switched on, so there's no risk to the live app while we roll out.

7. What we'd need & safeguards

- A CapTracker **Slack app** in the AlphaSights workspace (bot token + interactivity). Phase 1 needs only an incoming-webhook URL.
- **Email -> Slack** user matching for DMs (both on @alphasights.com).
- Secrets (tokens, signing secret) stored with our other production secrets — never in code, per the security standard.
- **Privacy preserved**: DMs go only to the one recipient (same scoping the app already enforces); channel posts carry no private client detail.
- Per-person opt-out so Slack stays useful, not noisy.

8. Recommendation

Start with **Phase 1** — "up for grabs" broadcasts to a Slack channel. It's the biggest win for the least effort, needs no per-user setup, and lets the team feel the value before we invest in the full Slack app. If it lands well, Phases 2–3 add personal DMs, one-tap actions, and the personal-reminder nudges.

Prepared with CapTracker's current notification model. Samples are illustrative mock-ups of Slack messages, not screenshots. Happy to demo Phase 1 on request.
